The Link-Belt Contractor Handling Grapple (LCG Series) is designed for waste handling and recycling, construction and demolition material handling and sorting, and primary demolition applications. Available with perforated or heavy-duty ribbed tines that close at a very flat angle to assist in compacting material. Maximum crushing force compacts material while the strong rotation system resists back-driving forces.

The LCG contains a single, oversized cylinder with dual drag links that minimizes the number of moving parts, simplifying the hydraulic system and reducing maintenance.

1. Single cylinder with dual drag links minimizes the number of moving parts and simplifies the hydraulic system
2. Streamlined tine, frame and linkage design with easy-to-locate grease fittings simplifies maintenance
3. Oversized cylinder design incorporates rod protection, maximum crushing force to densify material, bolt-on gland cap for durability, and easy maintenance
4. Large recessed side covers provide easy access to internal components while protecting the cover fasteners
5. Common pins, pin keepers and bearings
6. Tines close at a very flat angle to assist in compacting material
7. Strong rotation system resists back-driving forces when compressing material
8. Positive tine stops take the load off the cylinder, extending life
